

growth and tag retention rates. Information will be collected on turtle numbers, species, size, sex, tags, health status, stock origin, and behavior and movement patterns. Genetic analysis of blood samples will contribute to an international effort to determine stock structure of Pacific sea turtles. The applicants request a 5-year permit from March 1, 1996.

Application P534A requests authorization to capture 20 green sea turtles (*Chelonia mydas*) annually in South San Diego Bay, take blood samples, attach tags and transmitters, and measure heart rate and internal temperature. Some turtles may have lavage stomach sampling performed. The purpose of the research is (1) to determine habitat preferences, behavioral activity patterns (such as foraging behavior), and residence patterns, and (2) to determine thermal preferences. The applicant requests a 2-year permit from September, 1996. Both applicants (P602 and P534A) will be coordinating their research efforts.

Those individuals requesting a hearing on either application should set out the specific reasons why a hearing on that particular application would be appropriate (see **ADDRESSES**). The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries, NOAA. All statements and opinions contained in these application summaries are those of the applicants and do not necessarily reflect the views of NMFS.
